Nordic Smart Government 3.0

Our Vision with Nordic Smart Government is to **make life simpler for SMEs** in the Nordic Region....

We are going to make real-time financial data available for public and private actors nationally and across the Nordic countries

Goal 2020: The objective of the program is to provide a roadmap by 2020, including legislative and technical implementation across the Nordic countries, to the Nordic Ministers of Business.

Estimated effect
**25-27 billions
euro/yearly** from
2027
In the 5 Nordic countries

Creating value for the SMEs

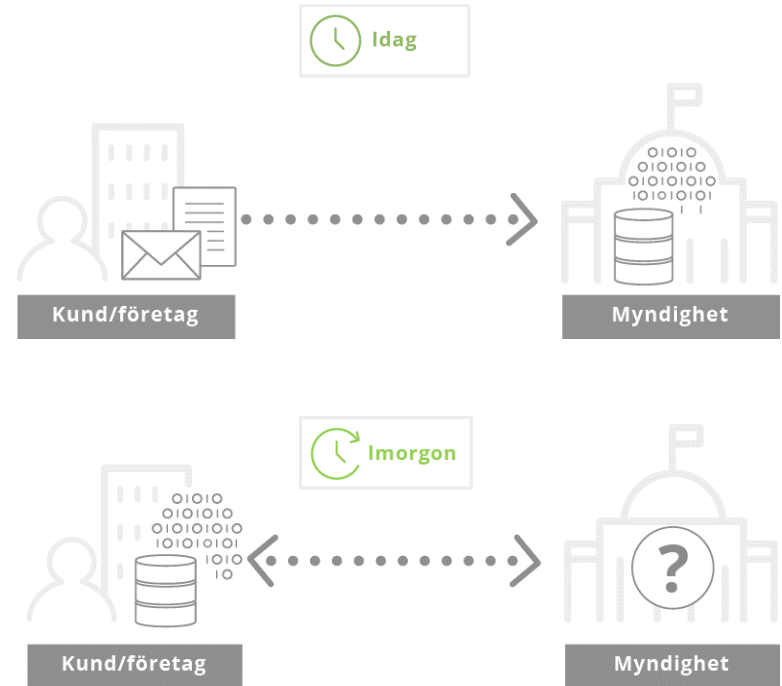

More time to focus on the business?

- Better overview of own business
- Reduced administrative burdens and saved time by automatic financial processes and reporting
- Transparent market and therefore increased trust in business partners
- Better competition and a more effective Nordic market – and thus a higher value creation in our region
- Simplifying cross-border business via aligned standard
- Easier credit assessment – easier to be an entrepreneur

Result: Growth, innovation and more time to do actual business

Creating value for public authorities, financial institutions and other stakeholders

- Transparency - easier to supervise and control
- Minimal document management
- Real-time data policy initiatives, impact measurements
- Less risk of fraud, better financial advice, analyses
- Innovation, growth, product development, access to a Nordic market

NSG – “solutions”

Ambition for the next two years: Defining requirements (legal, semantic, technical, organizational) for public and private digital systems

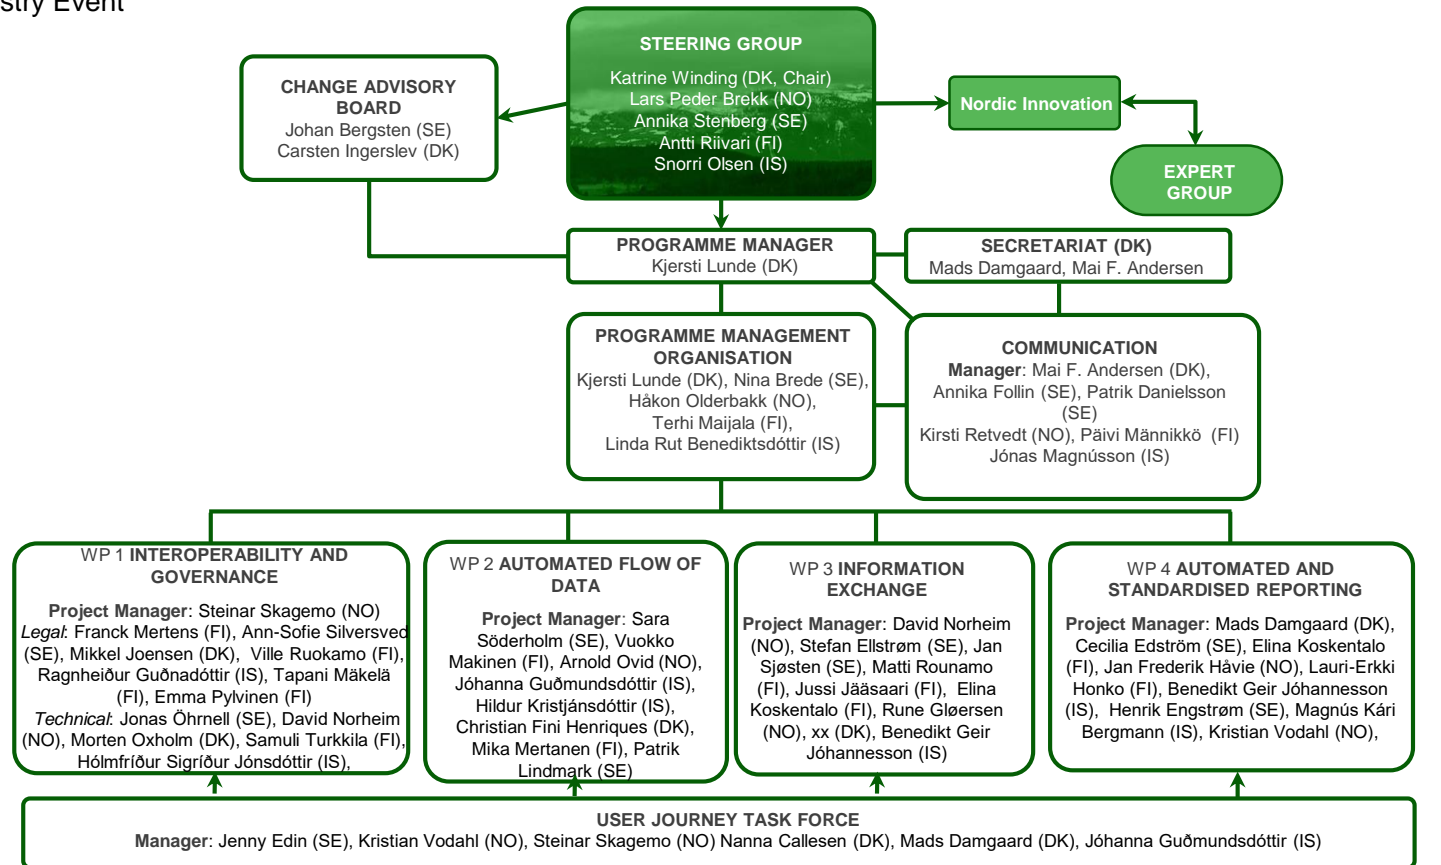

- Compatible with other digital systems, so data is automatically shared in the Nordic region
- WP1: Enabling interoperability on national and Nordic level: Defining regulation, standards and processes which can be adapted by the Nordic countries – and by other EU countries”
- WP2: Automated flow of business transaction data (ensuring quality input data)
- WP3: Implementing WP1 & 2: Defining information exchange and governance”
- WP4: Demonstrating the value of real-time data to small business, authorities and 3rd party service provider

Creating value for public authorities, financial institutions and other stakeholders

- Transparency - easier to supervise and control
- Minimal document management
- Real-time data policy initiatives, impact measurements
- Less risk of fraud, better financial advice, analyses
- Innovation, growth, product development, access to a Nordic market

An unique collaborative program

- Work across borders, fields and institutions
- Countries involved
 - Sweden
 - Norway
 - Finland
 - Denmark
 - Iceland
- Institutions involved include
 - Business registries
 - Statistics
 - Tax authorities
 - Various governmental bodies and stakeholder groups
- Funded by Norden Nordic Innovation
 - Have formed an expert panel to review the project

Nordic Smart Government is funded by Norden Nordic Innovation/Nordic Council of Ministers

AI/ Machine learning / Robotics

Nordic Smart Government enables new opportunities

- Better support for accounting
- Better support for automatic reporting
- Better support for credit risk assessment

Some other examples independent of Nordic Smart Government

- Automatic processing of Mortgage in Movable property, Mainly deterministic
- Automatisation and support in processing in Business Registration, Partly deterministic
- Use of Machine learning to support and partly automate assignment of code for line of business(NACE) based on description of business activity.
- Early initiatives amongst Nordic Business Registers for early detection of potential fraud

Thank you for the attention!

SESSION II: USE OF RPA&AI IN PUBLIC REGISTERS

“Robotic process automation at the Norwegian Mapping Authority: achievements and future plans”

JAN OLAV KNUTSEN

Project Manager, Electronic
Registration, Norwegian
Mapping Authority

Robotic process automation at the Norwegian Mapping Authority: achievements and future plans

Jan Olav Knutsen, The Norwegian Mapping Authority

Key figures for 2018

- 1.601.576 – registrations in Land book
- 98,9% - two days – processing time
- 99,7% - quality – correct registrations
- Call Centre – average time 87 seconds to respond
- Key knowledge; regional differences and specific challenges

Organisation

In total: Approx.
300 employees
Call Centre: 20
Legal staff: 19
Cadastre: 27
Technical staff: 24

E-registration - status

- E-registrations (May 3rd)
 - ca. 42,2 % electronically submitted
 - ca 36,7 % fully electronic
- Users – only for professionals
 - 117 banks
 - 130 real estate brokers
 - 36 lawyers

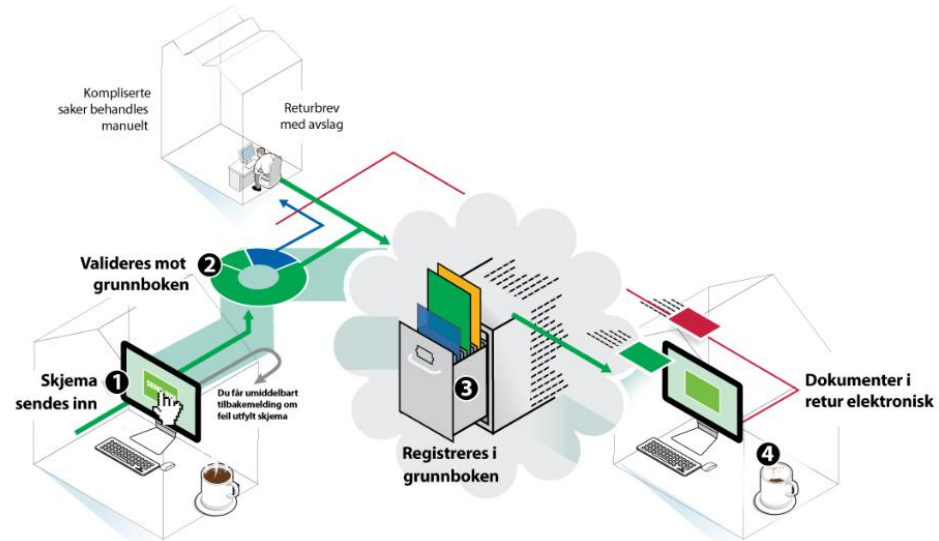

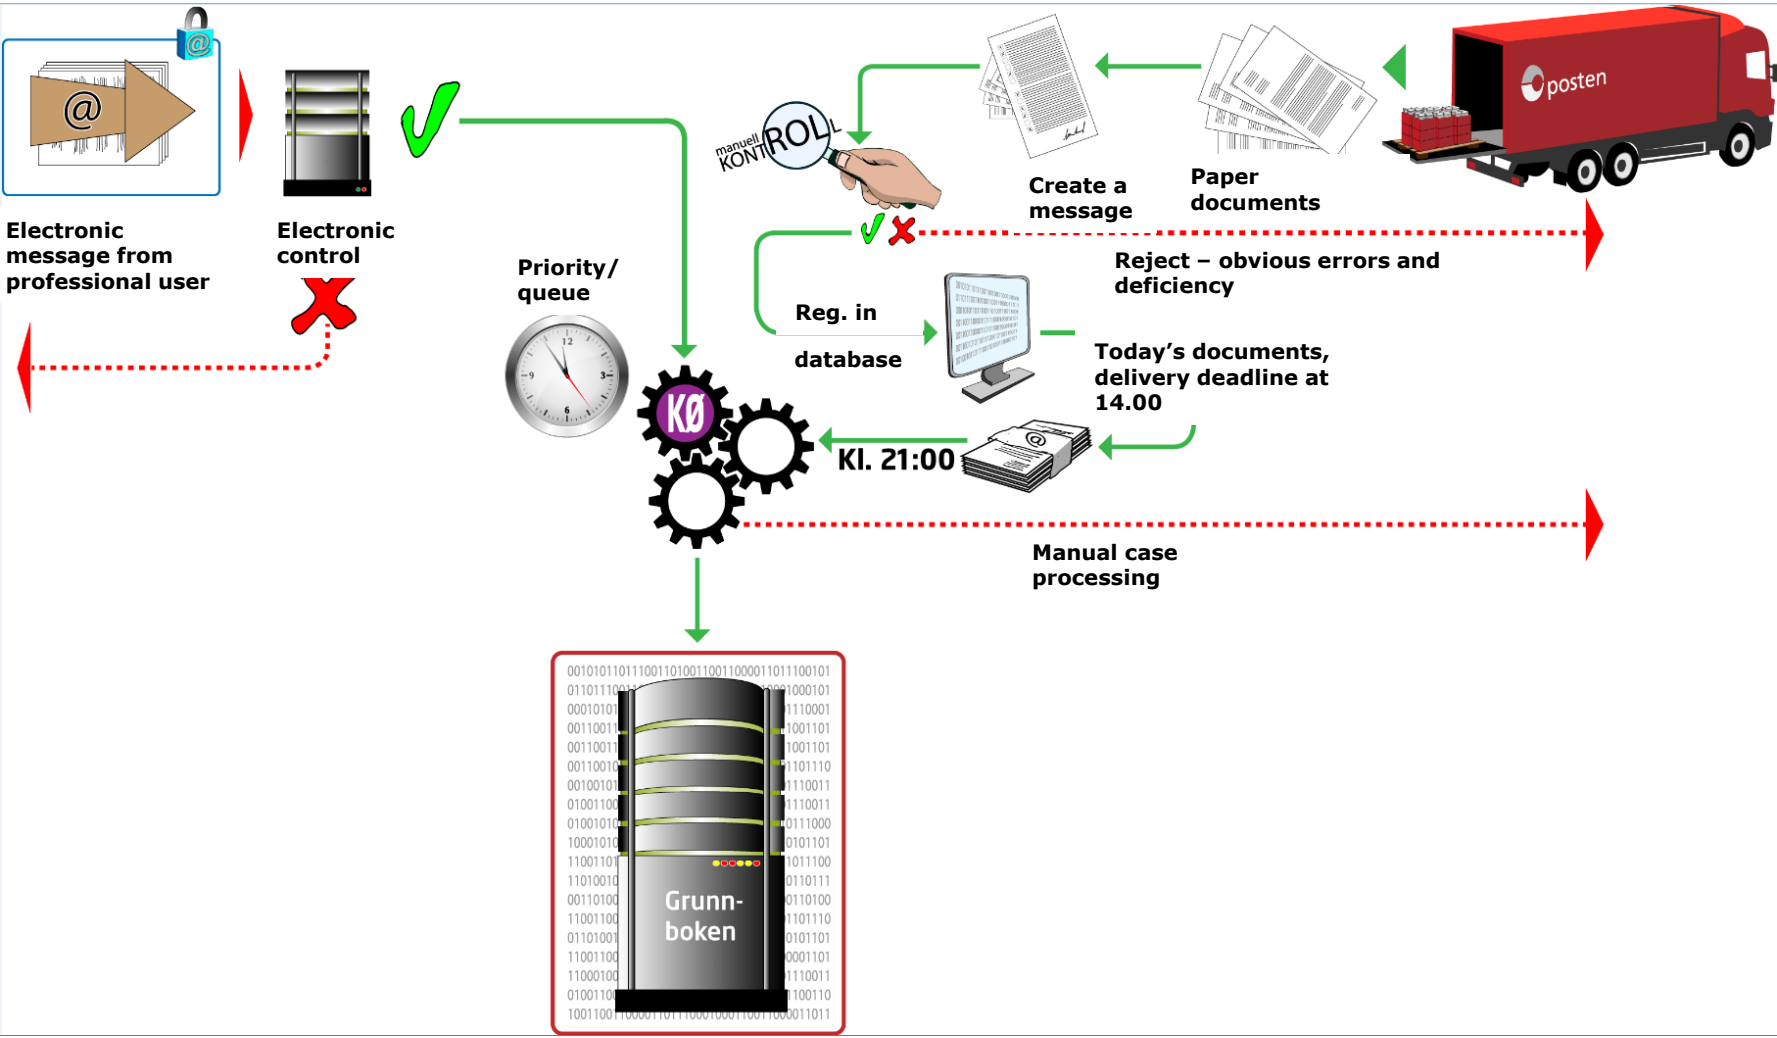

E – registration 2018

- Time priority
- Electronically signed documents
 - Deeds - Title documents
 - Mortgages
 - Liquidating a document
 - Claim associated with debt collection
 - Bankruptcy notification
 - Concession
- Messages from cadastre to land book
 - To different types of division of a real property for making a new unit real property
 - Joining properties

Grunn-boken

High availability

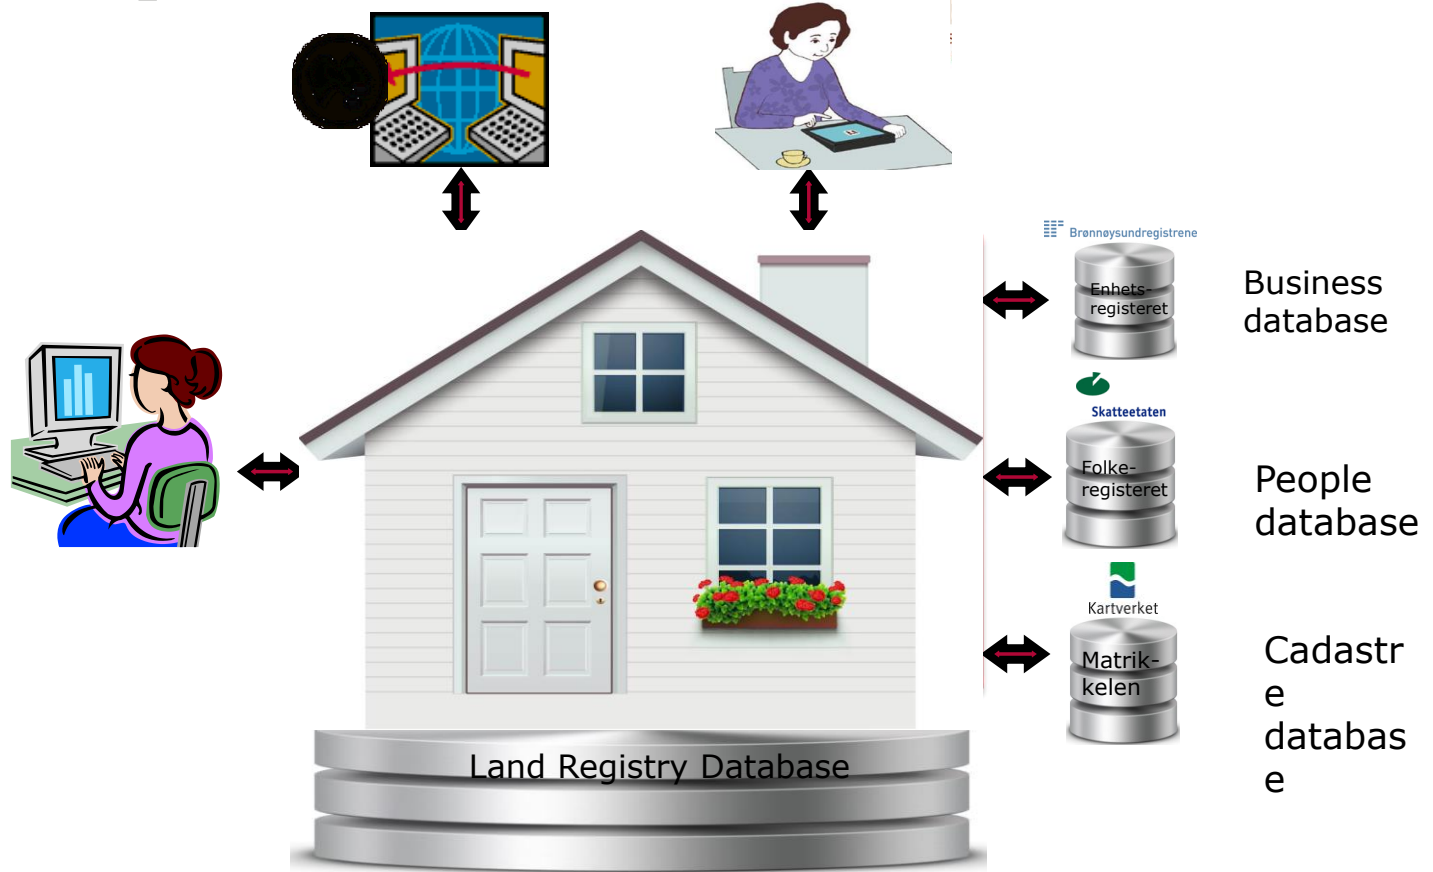

- Our service-level agreements demand high availability of our systems, which our maintenance team excels in delivering, with an uptime upwards of 99,8 percent.
- Within electronic registration, we deliver in seconds
- For paper documents we deliver in two days
- Postal deliverables will drop dramatically next 2 – 3 Years

Our strategy

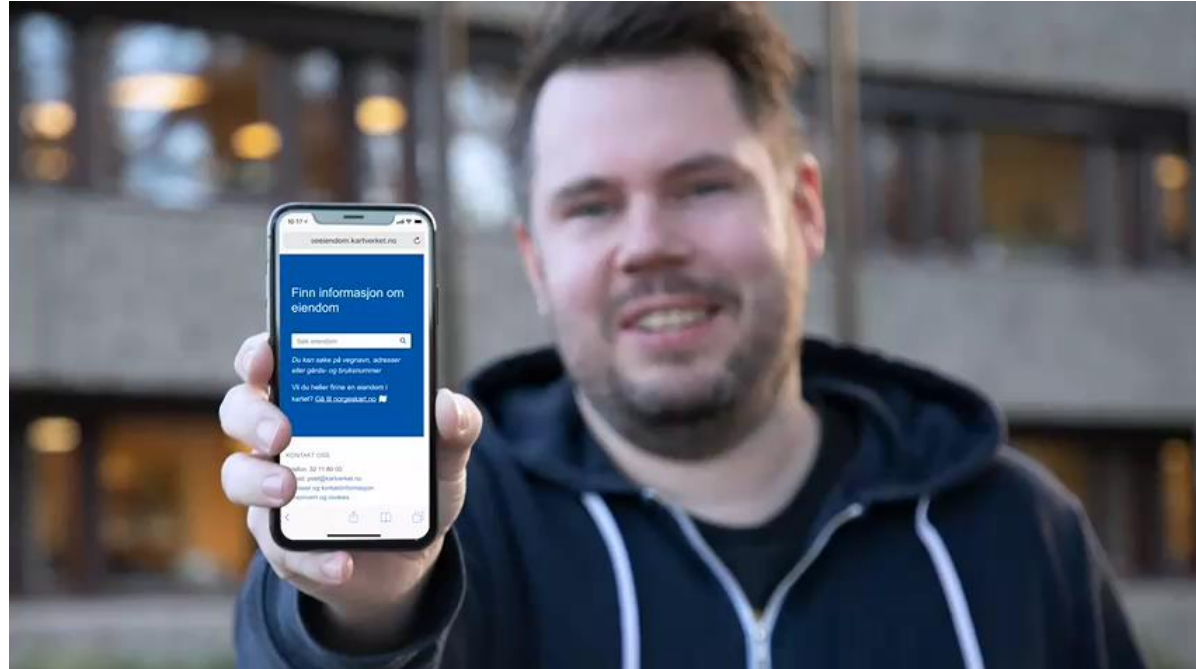

Area/strategy	Present situation (April 2019)	Wanted situation (in 3 years)	Activities - what to do
Percentage digitized - as digitally as possible	<ul style="list-style-type: none"> • 42% electronic documents submitted • 0% documents from the mortgage book are sent out digitally (email not included) • When sending out a print from the land book <ul style="list-style-type: none"> • Digital in – digital out • Paper in – paper out • Ordering prints from the land book- only on paper 	<ul style="list-style-type: none"> • 80% digital submission • 100% digital and automatic from the mortgage book • 100% digital and automatic envoys from the land book • 100% digital and automatic solution for ordering prints from the land book 	<ul style="list-style-type: none"> • Digital infrastructure • Develop an IT portal for small companies and the public • Differentiate the fees • Facilitating dispatch in digital mailboxes

System Architecture

First step – SeEiendom.no

- Information from Cadastre and Land Registry
- New version adapted to all types of mobile phones in 2018
- Our new platform - electronic registration - everybody
 - Made a demo in 2018
- Regular meetings with our professional users

Next step – IT portal for small companies and the public

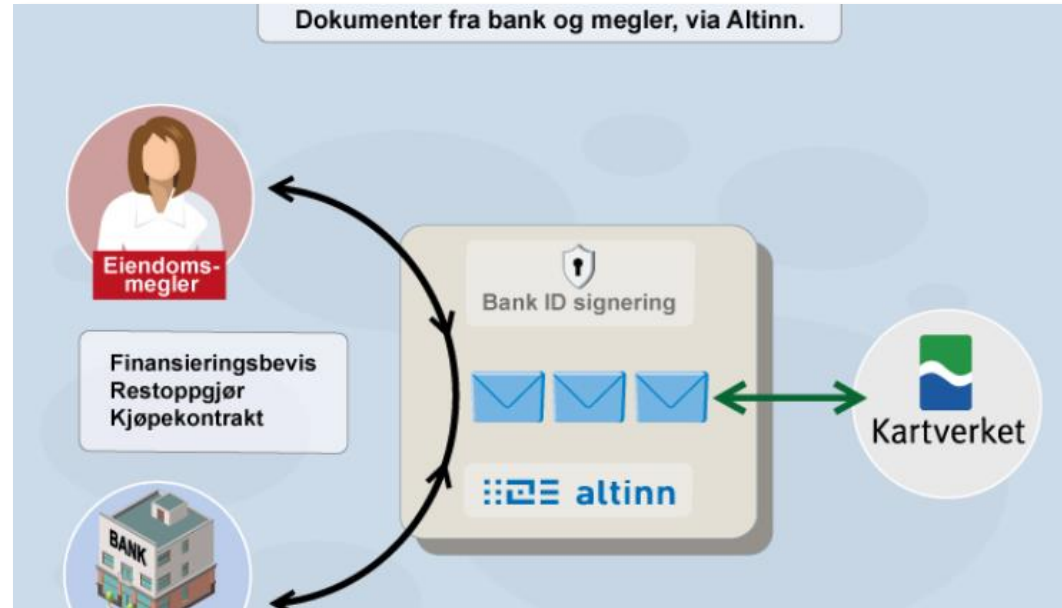

- We have developed a pilot to demonstrate how small companies and private can register. The first step is for small companies, such as lawyers.
- The solution is under implementation as we speak. Goal → First version in production by end of 2019.

New digital solution to enhance the digital estate trading

The Ministry of Local Government and Modernisation – allowed us in 2019 to establish:

- Public infrastructure – digital estate trading!
- Communications between banks and real estate
 - Use of documents **prior to** registration in the land book
 - Outstanding debts
 - Contracts
